

SAFEGUARD

SOFTWARE

SafeGuard Digital Video Software is designed to make viewing live and recorded video a snap. The first response from many of our customers after being shown how to use the software is 'That is easy !'. With an uncluttered interface and an intuitive design, you are able to get what you need done quickly so you can get on with your business. Our remote client viewing software is even easier to use than many of today's big name applications, once configured viewing your site remotely is simply a click away. Things like dynamic IP tracking, system monitoring, serial number tracking, user access security and proven rock solid hacker and virus protection give you software that's reliable and easy to use.

Software that is easy to use and understand.

Zero configuration on initial setup. Simply plug in cameras and go.

Automatic IP tracking. No hassle remote connections.

Integrated system health and status monitoring.

Easily review recorded video. Graphical display speeds searching.

Save clips and/or snapshots with ease.

View and record analog or IP based cameras.

PLUG IN YOUR CAMERAS AND GO

Plug in your cameras and go. Out of the box, in operation and recording in mere seconds. Software that is preconfigured for the majority of security environments, make all setups a snap. Why sacrifice the power, flexibility, reliability and adaptability that a global, billion dollar operating system offers for one that is free. Those that say an embedded system is easier and safer are wrong, our PC based Windows powered systems are easier, safer, more user-friendly and have a proven reliability track record.

EASILY VIEW LIVE VIDEO

This is the screen your recorder will spend most of its time, so we have kept the screen simple and with all the important information in plain view. Depending on the number of cameras connected you can configure the screen orientation to your liking e.g. 4 cameras in view , 10 cameras in view, etc. The current date and time as well as recording status is also displayed. At a quick glance not only will you be presented with your current security situation, but you will also know the status of your recorder.

QUICKLY REVIEW SAVED VIDEO

The date, hours and minutes of recorded view are displayed graphically and colour coded. Since most video is recorded only when there is motion, the recording is displayed in a graphical format that allows you to see at a glance what days, hours and minutes have recorded activity. With a few mouse clicks you can jump from day to day, hour to hour, and minute to minute of recorded video. With each click the displayed video is updated so you can quickly find what you are looking for.

USER ACCESS CONTROL

Controlling who accesses your data and what they see is an important part of any security tool. The SafeGuard software gives you control over all of these and more. Not only can you assign user names and passwords, you can also control what cameras they will see, if they can connect remotely and what they can do once they are logged in.

SAFEGUARD Software

SYSTEM MONITORING AND IP TRACKING

Sometimes the greatest feature of a piece of software is not what you see but what is running behind the scenes. On every SafeGuard unit a system monitoring application is running, reporting on the health, connectivity and security of your unit. If certain failures are detected it will make an attempt to recover from them using proven methods. Couple this with internet connectivity, our website and the client software, you will always know the status of your security.

HELP WHEN YOU NEED IT

Due to the tight integration between our units and our web site we are able to offer our dealers unprecedented support. From routers, networks and camera configuration, to assisting the end-user, our support staff help our dealers get the job done quickly and painlessly.
